## **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Steven Koffs on 05/22/06.

The application has been amended as follows: nonelected claims 17-22 with traverse have been canceled.

Application/Control Number: 10/766,536 Page 3

Art Unit: 2871

## **REASONS FOR ALLOWANCE**

2. Claims 1, 3-12, 15-16, 23, 25-34 and 37-38 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record does not anticipate nor render obvious to one ordinary skilled in the art a method of bonding integrated circuit chips and other devices to a liquid crystal display panel comprising a combination of various steps as claimed, more specifically, compressing the one of the first integrated circuit chip and the other device together with the panel, placing the other one of the first integrated circuit chip and the other device on a second area portion of the film, compressing the other one of the first integrated circuit chip and the other device together, wherein the first integrated circuit chip is electrically connected with the other device through the anisotropic conductive film extending continuously from the first integrated circuit chip to the other device.

Kawasaki('400)/Takahashi('123) disclose a method of bonding integrated circuit chips and other devices to an LCD panel comprising steps of forming integrated circuit chip, forming anisotropic conductive film, forming other driving devices. However, the prior art of record fails to disclose a method of bonding integrated circuit chips and other devices to an LCD panel comprising a combination of various steps as claimed, more specifically, 'compressing the one of the first integrated circuit chip and the other device together with the panel, placing the other one of the first integrated circuit chip and the other device on a second area portion of the film, compressing the other one of the first integrated circuit chip and the other device together, the first integrated circuit chip is electrically connected with the other device through the anisotropic conductive film extending continuously from the first integrated circuit chip to the other device'.
